

# Best Results on Permanent Hair Reduction in Adelaide

Permanent hair reduction in Adelaide provides better results in reducing unwanted hairs permanently. Hair reduction is a medical procedure that uses a laser pulsating beam of light to remove unwanted hairs. During laser hair removal, a laser beam passes through the skin to an individual hair follicle. The intense heat of the laser damages the hair follicle, which inhibits future hair growth. Laser hair removal most effectively slows hair growth. It typically takes multiple hair removal treatments to provide an extended hair free period. Periodic maintenance treatments might be needed as well. Results are seen immediately after the treatment; the results vary from patient to patient. The color and thickness of the hair, area treated, type of laser used and color of skin are some of the main factors that affect the results.

## **Safety Record for Permanent Hair Reduction Adelaide:**

Laser plays an important role in treating many conditions that affect the skin, hair and nails. In recent years, many advances have been made in laser treatments. Dermatologists have led the way in making these advances. One such advance is that more people can safely have laser hair removal. Laser or light energy is selectively absorbed by the melanin in hair follicles and converted to heat to diffuse and damage stem cells. [Permanent hair reduction in Adelaide](#) can only be achieved during the active growth phase is considered permanent when a significant amount of hair does not return for a period of time longer than the complete growth cycle. After a series of treatments, most hair is permanently removed.
